

FREEDOM

TRANSCRIPTS PROCESSING SOLUTION OVERVIEW

Shamrock's Freedom software is a powerful intelligent automation solution designed to streamline the processing of transcripts for Higher Education institutions.

Freedom's advanced OCR technology can quickly and accurately extract key information from transcripts, allowing you to standardize and interpret student records with ease.

EXPEDITE TRANSCRIPT PROCESSING

In today's fast-paced and competitive higher education landscape, admissions and registrar officers face numerous challenges in processing the increasing volume of high school, transfer credit, international, and military transcripts. Traditional manual data entry is time-consuming, costly, and prone to errors, while outdated systems struggle to integrate with course equivalency databases and provide efficient processing, resulting in delays and missed opportunities for enrollment.

SAY 'HELLO' TO FASTER, MORE ACCURATE ADMISSIONS DECISIONS

Freedom assists higher education institutions by streamlining the management of high school, transfer credit, international, and military transcripts, significantly reducing processing time and manual data entry costs. Its seamless integration with course equivalency databases and existing systems simplifies the admissions process, enabling admissions and registrar officers to make faster, more informed decisions.

As a result, higher education institutions can provide a more efficient and satisfying experience for prospective students, ultimately enhancing their reputation and competitiveness in the increasingly demanding higher education landscape.

The same core capabilities that power our transcript processing platform can also transform time-consuming, manual tasks in student-focused and administrative areas across campus, including financial aid, document classification and indexing in the business office, invoice processing in AP/AR, compliance, and many more.

"We needed a partner that was willing to invest in our success. We partnered with Shamrock after speaking with their very satisfied customers, and Shamrock did just that!"

Tracy, Jefferson College

HIGH SCHOOL TRANSCRIPTS - A GAME CHANGER

Freedom's ability to process high school transcripts and make sense of high school coursework sets it apart from other providers. It standardizes and extracts meaning from varied high school coursework, integrating with a university's course equivalency database for easier staff review. With the growing trend of "test optional" policies, accurately addressing past coursework and awarding relevant credit hours is more important than ever.

TRANSCRIPT-AS-A-SERVICE (TAAS) MODEL

Freedom offers a TAAS model, our twist on the SAAS (software as a service) concept. Institutions can submit their transcripts to Shamrock, and our team will process them through Freedom, delivering the data back to the university staff or SIS within 24 hours. This "touchless" option provides an efficient and seamless experience for admissions teams.

CLOUD-BASED SOLUTION

Freedom is hosted in the cloud, eliminating the need for on-site infrastructure for institutions in either self-service or TAAS models. Simply access the platform through your web browser.

CONTINUOUS IMPROVEMENT

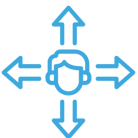

Freedom's algorithm capabilities will improve over time as more transcripts are processed, increasing its value as the platform matures.

Fast turnaround times: Freedom processes transcripts in under 24 hours and allows institutions to provide notice to students within 3 days, enhancing the student experience and potentially impacting their decision to attend the institution.

Cost-effective: Freedom alleviates the high costs associated with traditional manual data entry, enabling institutions to access important data faster and repurpose staff to higher value work.

Versatile: Freedom can process high school, transfer credit, international, and military transcripts, ensuring comprehensive automation for all incoming transcripts.

Are you ready to elevate your transcript processing experience?
